**Labour Force Survey, June 2019 [Canada] (LFS June 2019)***Enquête sur la population active, Juin 2019 [Canada]*

| Overview  |  |
|---|--|
| Type  | Labour Force Survey  |
| Identification  | LFS-71M0001-E-2019-June  |
| Version   | Production Date: 2019-07-05<br>July 5, 2019  |
| Series  | The Labour Force Survey provides estimates of employment and unemployment which are among the most timely and important measures of performance of the Canadian economy. |
| <b>Abstract</b><br><p>This public use microdata file contains non-aggregated data for a wide variety of variables collected from the Labour Force Survey (LFS). The LFS collects monthly information on the labour market activities of Canada's working age population. This product is for users who prefer to do their own analysis by focusing on specific subgroups in the population or by cross-classifying variables that are not in our catalogued products. This file contains both personal characteristics for all individuals in the household and detailed labour force characteristics for household members 15 years of age and over. The personal characteristics include age, sex, marital status, educational attainment, and family characteristics. Detailed labour force characteristics include employment information such as class of worker, usual and actual hours of work, employee hourly and weekly wages, industry and occupation of current or most recent job, public and private sector, union status, paid or unpaid overtime hours, job permanency, hours of work lost, job tenure, and unemployment information such as duration of unemployment, methods of job search and type of job sought. Labour force characteristics are also available for students during the school year and during the summer months as well as school attendance whether full or part-time and the type of institution. These and more are available by province and for the three largest census metropolitan areas (Montreal, Toronto, Vancouver). This is a monthly file, and is available going back to 1976.</p> |  |
| Kind of Data  | Survey data  |

| Countries  | Canada  |
| <b>Geographic Coverage</b><br>Canada<br>Provinces<br>Territories   |   |
| <b>Universe</b><br><p>The LFS covers the civilian, non-institutionalised population 15 years of age and over. It is conducted nationwide, in both the provinces and the territories. Excluded from the survey's coverage are: persons living on reserves and other Aboriginal settlements in the provinces; full-time members of the Canadian Armed Forces, the institutionalized population, and households in extremely remote areas with very low population density. These groups together represent an exclusion of less than 2% of the Canadian population aged 15 and over. There are no questions in the LFS that ask respondents whether they are temporary foreign workers. Therefore it is not possible to produce counts of, or employment numbers for, temporary foreign workers from the LFS. If contacted for the LFS, temporary foreign workers will be included only if they identify the selected dwelling as their usual place of residence. In addition, they cannot be separated from a larger group of respondents</p> |   |

who were not born in Canada and who are not landed immigrants. In 2014, the 'other' category represented 2% of the employed population and would therefore have a negligible impact on the overall employment numbers. Also included in this group are: Canadian citizens by descent who were born elsewhere, foreign students with a study permit, claimants of refugee status or family members of immigrants who are not landed immigrants themselves. National Labour Force Survey estimates are derived using the results of the LFS in the provinces. Territorial LFS results are not included in the national estimates, but are published separately.

## Sampling

### Sampling Procedure

The LFS uses a probability sample that is based on a stratified multi-stage design. Each province is divided into large geographic stratum. The first stage of sampling consists of selecting smaller geographic areas, called clusters, from within each stratum. The second stage of sampling consists of selecting dwellings from within each selected cluster. The LFS uses a rotating panel sample design so that selected dwellings remain in the LFS sample for six consecutive months. Each month about 1/6th of the LFS sampled dwellings are in their first month of the survey, 1/6th are in their second month of the survey, and so on. One feature of the LFS sample design is that each of the six rotation groups can be used as a representative sample by itself. Within selected dwellings, basic demographic information is collected for all household members. Labour force information is collected for all civilian household members who are aged 15 and over. Recently, the monthly LFS sample size has been approximately 56,000 households, resulting in the collection of labour market information for approximately 100,000 individuals. It should be noted that the LFS sample size is subject to change from time to time in order to meet data quality or budget requirements. With the recent increase in coverage in Nunavut, the sample for all three territories is representative of the working-age population of each territory. Nunavut was initially designed to cover ten of the largest communities in the region, representing about 70% of all Nunavut residents aged 15 years and over. The increase in survey coverage in that territory, effective in the spring of 2009 and retroactive to the winter of 2008, brings it on par with the other two territories (96% in the Northwest Territories, 93% in Nunavut and 92% in Yukon). The LFS sample is allocated to provinces, territories and regions within provinces to meet the need for reliable estimates at various geographic levels. These include national, provincial, territorial, census metropolitan areas (large cities), economic regions and employment insurance regions.

### Response Rate

Non-response to the LFS tends to average about 10% of eligible households. Interviewers are instructed to make all reasonable attempts to obtain LFS interviews with members of eligible households. Each month, after all attempts to obtain interviews have been made, a small number of non-responding households remain. For households non-responding to the LFS, a weight adjustment is applied to account for non-responding households. Sampling errors associated with survey estimates are measured using coefficients of variation for LFS estimates as a function of the standard error and the size of the estimate.

### Weighting

The final step in the processing of LFS data is the assignment of a weight to each individual record. This process involves several steps. Each record has an initial weight that corresponds to the inverse of the probability of selection. Adjustments are made to this weight to account for non-response that cannot be handled through imputation. In the final weighting step all of the record weights are adjusted so that the aggregate totals will match with independently derived population estimates for various age-sex groups by province and major sub-provincial areas. One feature of the LFS weighting process is that all individuals within a dwelling are assigned the same weight. In January 2000, the LFS introduced a new estimation method called Regression Composite Estimation. This new method was used to re-base all historical LFS data. It is described in the research paper "Improvements to the Labour Force Survey (LFS)", Catalogue no. 71F0031X. Additional improvements are introduced over time; they are described in different issues of the same publication.

| <b>Data Collection</b>   |   |
|--|---|
| <b>Data Collection Dates</b>   | start 2019-06-17<br>end 2019-06-21  |
| <b>Time Period(s)</b>  | start 2019-06-10<br>end 2019-06-14  |
| <b>Data Collection Mode</b>  | Data collection for the LFS is carried out each month during the week following the LFS reference week. The reference week is normally the week containing the 15th day of the month. LFS interviews are conducted by telephone by interviewers working out of a regional office CATI (Computer Assisted Telephone Interviews) site or by personal visit from a field interviewer. Since 2004, dwellings new to the sample in urban areas are contacted by telephone if the telephone number is available from administrative files, otherwise the dwelling is contacted by a field interviewer. The interviewer first obtains socio-demographic information for each household member and then obtains labour force information for all members aged 15 and over who are not members of the regular armed forces. The majority of subsequent interviews are conducted by telephone. In subsequent monthly interviews the interviewer confirms the socio-demographic information collected in the first month and collects the labour force information for the current month. Persons aged 70 and over are not asked the labour force questions in subsequent interviews, but rather their labour force information is carried over from their first interview. Starting in 2015, LFS respondents who met certain criteria were offered the option of completing the survey on-line for subsequent interviews. In each dwelling, information about all household members is usually obtained from one knowledgeable household member. Such 'proxy' reporting, which accounts for approximately 65% of the information collected, is used to avoid the high cost and extended time requirements that would be involved in repeat visits or calls necessary to obtain information directly from each respondent. |
| <b>Data Collection Notes</b><br><p>The current LFS questionnaire was introduced in 1997. At that time, significant changes were made to the questionnaire in order to address existing data gaps, improve data quality and make more use of the power of Computer Assisted Interviewing (CAI). The changes incorporated included the addition of many new questions. For example, questions were added to collect information about wage rates, union status, job permanency and workplace size for the main job of currently employed employees. Other additions included new questions to collect information about hirings and separations, and expanded response category lists that split existing codes into more detailed categories. The questionnaire was also extensively restructured in terms of the order of the questions and the flows between questions. For example, the job description questions about the current (or most recent) job were moved near the beginning of the questionnaire so that this information (especially the class of worker) could be used to control some of the question flow, question wording and applicable response categories in later questions. As well, some questions known to be problematic were modified through rewording or the inclusion of additional questions (e.g., the hours of work question series and the identification of persons on temporary layoff). Since the existing questionnaire had been designed as a paper questionnaire, the questionnaire redesign represented an opportunity to make extensive use of the power of CAI. This included the incorporation of question wording that depended upon answers to earlier questions, more complex question flows and an extensive set of on-line edits checking for logical inconsistencies. The implementation of the new questionnaire followed an extensive process of user consultations, questionnaire development and questionnaire testing. The questionnaire was phased in over a five-month period between September 1996 and January 1997.</p> |   |

## Data Processing & Appraisal

### Other Processing

Seasonal Adjustments - Most estimates associated with the labour market are subject to seasonal variation, that is, annually-recurring fluctuations attributable to climate and regular institutional events such as vacations, and holiday seasons. Seasonal adjustment is used to remove seasonal variations from almost 3,000 series, in order to facilitate analysis of short-term change for major indicators such as employment and unemployment by age and sex, employment by industry, and class of worker (employee or self-employed). Many of these indicators are seasonally adjusted at national and provincial levels. Seasonal

adjustments are made using the X-12-ARIMA method. Main labour force status estimates are also seasonally adjusted for census metropolitan areas (CMAs), and published as three-month moving averages to reduce irregular movements caused by relatively small sample sizes. At the start of each year the seasonally adjusted series are updated and revised according to the latest data and information for seasonal models and factors. The seasonally adjusted series are usually revised back three years. Adjusting estimates for population changes - Adjustments are also made to LFS data every five years after new population estimates become available following the most recent census. At that time, all LFS data back to the previous census is re-weighted using the new population estimates (since the new population estimates will cover the inter-censal period between the two most recent censuses), and all corresponding historical LFS estimates are revised. Therefore, at the beginning of 2015, all estimates were adjusted to reflect 2011 Census population counts and LFS estimates have been revised back to January 2001. Also, Census metropolitan areas (CMAs), Economic regions (ERs) and Census agglomerations are based on 2011 Census boundaries rather than 2006 boundaries. These and other changes are described in the research paper The 2015 Revisions of the Labour Force Survey (LFS), Catalogue no. 71F0031XWE201501.

### **Estimates of Sampling Error**

Since the LFS is a sample survey, all LFS estimates are subject to both sampling error and non-sampling errors. Non-sampling errors can arise at any stage of the collection and processing of the survey data. These include coverage errors, non-response errors, response errors, interviewer errors, coding errors and other types of processing errors.

### # LKPUBAG: Unemployed, used public employment agency

|                           |  |
|---------------------------|--|
| <b>Information</b>        | [Type= discrete] [Format=numeric] [Range= 1-1] [Missing=*] |
| <b>Statistics [NW/ W]</b> | [Valid=396 /-] [Invalid=100947 /-]                         |

| Value   | Label | Cases  | Percentage                    |
|---------|-------|--------|-------------------------------|
| 1       | Yes   | 396    | <div><div></div></div> 100.0% |
| Sysmiss |       | 100947 |                               |

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

### # LKEMPLOY: Unemployed, checked with employers directly

|                           |  |
|---------------------------|--|
| <b>Information</b>        | [Type= discrete] [Format=numeric] [Range= 1-1] [Missing=*] |
| <b>Statistics [NW/ W]</b> | [Valid=1433 /-] [Invalid=99910 /-]                         |

| Value   | Label | Cases | Percentage                    |
|---------|-------|-------|-------------------------------|
| 1       | Yes   | 1433  | <div><div></div></div> 100.0% |
| Sysmiss |       | 99910 |                               |

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

### # LKRELS: Unemployed, checked with friends or relatives

|                           |  |
|---------------------------|--|
| <b>Information</b>        | [Type= discrete] [Format=numeric] [Range= 1-1] [Missing=*] |
| <b>Statistics [NW/ W]</b> | [Valid=773 /-] [Invalid=100570 /-]                         |

| Value   | Label | Cases  | Percentage                    |
|---------|-------|--------|-------------------------------|
| 1       | Yes   | 773    | <div><div></div></div> 100.0% |
| Sysmiss |       | 100570 |                               |

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

| # LKATADS: Unemployed, looked at job ads  |   |        |                    |
|---|---|--------|--------------------|
| Information   | [Type= discrete] [Format=numeric] [Range= 1-1] [Missing=*]      |        |                    |
| Statistics [NW/ W]  | [Valid=2030 /-] [Invalid=99313 /-]                              |        |                    |
| Value   | Label   | Cases  | Percentage         |
| 1   | Yes   | 2030   | <div></div> 100.0% |
| Sysmiss   |   | 99313  |                    |
| Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest. |   |        |                    |
| # LKANSADS: Unemployed, placed or answered ads  |   |        |                    |
| Information   | [Type= discrete] [Format=numeric] [Range= 1-1] [Missing=*]      |        |                    |
| Statistics [NW/ W]  | [Valid=1150 /-] [Invalid=100193 /-]                             |        |                    |
| Value   | Label   | Cases  | Percentage         |
| 1   | Yes   | 1150   | <div></div> 100.0% |
| Sysmiss   |   | 100193 |                    |
| Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest. |   |        |                    |
| # LKOTHERN: Unemployed, other methods   |   |        |                    |
| Information   | [Type= discrete] [Format=numeric] [Range= 1-1] [Missing=*]      |        |                    |
| Statistics [NW/ W]  | [Valid=699 /-] [Invalid=100644 /-]                              |        |                    |
| Value   | Label   | Cases  | Percentage         |
| 1   | Yes   | 699    | <div></div> 100.0% |
| Sysmiss   |   | 100644 |                    |
| Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest. |   |        |                    |
